

ComodoTic
Launchpad

Project Overview :

What is ComodoTic?

ComodoTic is multi-chain launcpad platform, a product by PT Comodo Matic Decentralized, blockchain and DeFi developer based in Indonesia to be the place where potential projects meets early supporters.

ComodoTic is created to help new projects to do funding by pre-sale and token distributions. ComodoTic opens up opportunity to projects from multiple chain such as Polygon, BSC, ETH to launch their tokens and fund their project.

Project Background

With so many crypto coin projects that have sprung up, ultimately making irresponsible parties commit fraudulent actions or scams.

As well as the number of new projects that have difficulty in carrying out their promotional and pre-sales, this is the basis for

- ComodoTic as a place and means where a project can crowdfund and promote by conducting pre-sale sales of their tokens.

Goals

- Provide a platform for new crypto projects that will raise funds to develop their projects by providing opportunities for early investors to invest in the project, where ComodoTic as a forum will filter projects that will raise funds by pre-sale of their tokens and early investors have the opportunity to buy the tokens. The filtration in question is that each project will go through a KYC and audit process which aims to see the background and ensure that the project is really safe and can be trusted. In addition, ComodoTic will also assist the project in terms of promotion through the platform owned by Comodo Coin.

ComodoTic is multi-chain Launchpad platform, to bridge new upcoming projects to the early supporters of the project.

Go-To-Market Strategy

IDOs market niche is a very competitive one, especially on Polygon. To compete, 3% of tokens are allocated as Airdrop. Once an IDO has been launched CTIC tokens will be used to accumulate the native token of the coin that was launched at low prices and then

- distributed through the Vault mechanism. These tokens are essentially taken out of circulation for a longer period of time.

Product Viability

ComodoTic's Launchpad protocol lives and operates primarily on Polygon and integrates with Ethereum (while full-fledged multi-chain integrations on Solana, Tron, and Cardano also NFT LaunchPad coming soon) making it a 100%, decentralized, permissionless, safe & innovative IDO/INO platform.

Product Viability

- ◆ **Multi-chain:**
ComodoTic enables users to run other projects in a different chain than Polygon, allowing them to work on multiple projects altogether.
- ◆ **More Secure:**
 - ComodoTic implements KYC procedures to ensure security from malicious activity.
- ◆ **User Friendly:**
ComodoTic provides accessibility, faster-loading speed, and is responsive to users' demands.
- ◆ **Lower Cost:**
ComodoTic has a lower price point than its competitors, making it more appealing to users.

Token Economy

Detailed Token Metrics

Ticker	: CTIC
Token Supply	: 100,000,000
Project Valuation	: \$5,000,000
Initial Token Circulation	: 70,000,000
Initial Market Cap	: \$3,500,000
Platform Raise	: \$100,000

Detailed Token Metrics

◆ Seed Sale

Fundraised	: \$200,000
Price	: \$0.04
Lock-up quarter	: 30% unlocked at the TGE, then 20% on a quarterly basis and 10% the last

◆ Private Sale

Fundraised	: \$600,000
Price	: \$0.05
Lock-up quarter	: 30% unlocked at the TGE, then 20% on a quarterly basis and 10% the last

◆ Public Sale (SHO)

Fundraised	: \$100,000
Price	: \$0.05
Lock-up quarter	: 100% unlocked at the TGE
